

Quality passport

Ref. the packaging for the release date

Scope of Application

Polypropylene packaging is intended for packaging and storage of food products (e.g., shashlik, fermented cabbage, pickled cucumbers and tomatoes, salted fish, oil, fats of vegetable and animal origin, dairy products, etc.

Packaging

Packaging of polypropylene products is carried out in accordance with TR CU 005/2011, GOST 33756-2016. For polypropylene packaging, corrugated cardboard boxes or polyethylene bags can be used.

Transportation

Polypropylene packaging is transported by all types of transport in covered vehicles in accordance with the established rules for the carriage of goods. Special care must be taken when transporting products at temperatures below +5 C.

Storage

Polypropylene packaging shall be stored in closed, clean and dry premises protected from moisture and direct sunlight, at a distance of at least 1 m from heating devices on racks spaced at least 5 cm from the floor at temperatures from +5 to +30 C and relative air humidity from 20% to 80%. If storage was carried out at temperatures below + 5C, it must be kept in temperature conditions not lower than + 18C for 24 hours before use.

Operation

Temperature conditions for operation of containers made of polypropylene (from -0C to +80 C), from polypropylene using a frost-resistant component (from -25 C to +80 C).

If it is difficult to close the lid on the jar, it is necessary to warm it up in warm water or in a warm stream of air. In winter, in case of transportation of polypropylene packaging at negative temperatures, it is necessary to keep the products in normal temperature conditions for at least 24 hours before use.

Technical conditions for the transportation of products spilled or packaged in polypropylene packaging are developed by the product manufacturer. The following shall be provided when stacking polypropylene packaging with products for transportation in multiple rows as well as when stacking on pallets:

- solid spacer (plywood, fiberboard) between the rows;
- securing the polypropylene packaging against longitudinal movement (after three to four rows).

If these requirements are not met, the manufacturer is not responsible for safety of the goods transported in them. Polypropylene packaging processing methods are developed by the food manufacturer.

The product manufacturer develops methods for processing polypropylene packaging.

Environmental protection

Used polypropylene packaging shall be disposed of, and packaging contaminated with hazardous chemical products shall be buried in special landfills in accordance with the established sanitary standards. Polypropylene packaging can be recycled.

Manufacturer's warranty

The manufacturer warrants that the quality of polypropylene packaging meets the requirements of TR CU 005/2011, GOST 33756-2016, subject to the rules of transportation, storage and operation.

Conclusion on suitability

Polypropylene polymer packaging meets the requirements of TR CU 005/2011, GOST 33756-2016 and is recognized as fit for use.

Shelf life - 1 year from the date of manufacture.

Invoice No. T-24306 dd. March 17, 2021.
